

CodRexa Virtual Internship in Machine Learning

CineMatch – Hybrid Movie Recommendation Engine

Candidate: Shivansh Batra

Repository: github.com/shivanshbtr/CineMatch

Project Overview

CineMatch is an end-to-end machine learning recommendation system combining content-based filtering and collaborative filtering (SVD) with adaptive hybrid scoring. It is deployed through a FastAPI REST API with a Streamlit interface and Docker support.

Key Features

- Hybrid recommendation engine
- Content-based & collaborative filtering
- Adaptive hybrid scoring
- Cold-start handling
- FastAPI REST API
- Streamlit web application
- Dockerized deployment
- Modular architecture

Technology Stack

Python • pandas • NumPy • SciPy • scikit-learn • FastAPI • Streamlit • Docker

Dataset Sources

MovieLens ml-latest-small • TMDB 5000 Movie Dataset

Declaration

I hereby declare that this project was developed and submitted by me as part of the CodRexa Virtual Internship in Machine Learning.
